DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

None of the prior art of record is seen to disclose or suggest the limitation of claim 14 that wherein the segments are arranged in the direction of the circumference of the lid and are pivotably supported on the lid by a swivel arm, separate from the displacement actuator, that is interposed between the segments and the lid, the swivel arm in turn is pivotably connected to the segments; and pivotable support of the segments on the lid comprises at least one pivotable shaft or pivot axle that extend at right angles to displacement movement of the segments. For example, the closest reference found, Dobbs, teaches a collapsible pipe plug with slips with threaded contact surfaces that engage the threads of the drill pipe but does not teach wherein the segments are arranged in the direction of the circumference of the lid and are pivotably supported on the lid by a swivel arm, separate from the displacement actuator, that is interposed between the segments and the lid, the swivel arm in turn is pivotably connected to the segments; and pivotable support of the segments on the lid comprises at least one pivotable shaft or pivot axle that extend at right angles to displacement movement of the segments.

None of the prior art of record is seen to disclose or suggest the limitation of claim 27 that each locking segment is pivotably coupled, via swivel arms, to a pivotable shaft which is rotatably fixed to the lid such that rotation of the pivotable shaft biases the respective locking segment radially outwardly at right angles to a central axis of the

opening from an unlocked position to a locked position in which the protrusions of the locking segment engage grooves in a brim of the pressure container. For example, the closest reference found, Dobbs, teaches a collapsible pipe plug with slips with threaded contact surfaces that engage the threads of the drill pipe but does not teach each locking segment is pivotably coupled, via swivel arms, to a pivotable shaft which is rotatably fixed to the lid such that rotation of the pivotable shaft biases the respective locking segment radially outwardly at right angles to a central axis of the opening from an unlocked position to a locked position in which the protrusions of the locking segment engage grooves in a brim of the pressure container.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
